INSTALLATION AND SAFETY INSTRUCTIONS

TRANSLATION OF THE ORIGINAL MANUAL

IMPORTANT : Before assembly and start-up, please read and clearly understand all the documents relating to this equipment (professional use only).

THE PICTURES AND DRAWINGS ARE NON CONTRACTUAL. WE RESERVE THE RIGHT TO MAKE CHANGES WITHOUT PRIOR NOTICE.

KREMLIN - REXSON

150, avenue de Stalingrad

93 245 - STAINS CEDEX – France

☎ : 33 (0)1 49 40 25 25 **Fax** : 33 (0)1 48 26 07 16

www.kremlin-rexson.com

1. SAFETY INSTRUCTIONS

GENERAL SAFETY INSTRUCTIONS

CAUTION : The equipment can be dangerous if you do not follow our instructions concerning installation and servicing described in this manual and in accordance with applicable European standards and local national safety regulations.

Please carefully read all the instruction literature before operating your equipment.

Only trained operators can use the equipment (To acquire an essential training, please contact the "KREMLIN REXSON University" training center - Stains).

The foreman must ensure that the operator has understood the safety instructions for this equipment as well as the instructions in the manuals for the different parts and accessories.

Read carefully all instruction manuals, label markings before operating the equipment.

Incorrect use may result in injury. This equipment is for professional use only. It must be used only for what it has been designed for. Never modify the equipment. The parts and accessories supplied must be regularly inspected. Defective or worn parts must be replaced.

Guards (motor cover, coupling shields, connectors,...) have been designed for a safe use of the equipment.

The manufacturer will not be held responsible for bodily injury or failure and / or property damage due to destruction, the overshadowing or the partial or total removal of the guards.

Never exceed the equipment components' maximum working pressure.

Comply with regulations concerning safety, fire risks, electrical regulations in force in the country of final destination of the material. Use only products or solvent compatible with the parts in contact with the material (refer to data sheet of the material manufacturer).

PICTOGRAMS

					
NIP HAZARD	WARNING MOVING ELEVATOR	WARNING MOVING PARTS	WARNING MOVING SHOVEL	DO NOT EXCEED THIS PRESSURE	HIGH PRESSURE HAZARD
					
RELIEF OR DRAIN VALVE	WARNING HOSE UNDER PRESSURE	WEAR GLASSES OBLIGATORY	WEAR OF GLOVES IS OBLIGATORY	PRODUCT VAPOR HAZARDS	WARNING HOT PARTS OR AREAS
					
ELECTRICAL HAZARD	WARNING FIRE HAZARDS	EXPLOSION HAZARDS	GROUNDING	WARNING (USER)	WARNING SERIOUS INJURIES

FIRE - EXPLOSION - SPARKS - STATIC ELECTRICITY HAZARDS

A poor earth connection, inadequate ventilation, sparks or static electricity can cause an explosion or fire. to avoid these risks when using or servicing KREMLIN REXSON equipment, the following safety procedures must be followed :

- ensure a good earth connection and ground the parts to be handled i.e. solvents, materials, components and equipment,
- ensure adequate ventilation,
- keep working area clean and free from waste solvents, chemicals, or solid waste i.e. rags, paper and empty chemicals drums,
- never use electrical switches / power if in an atmosphere of volatile solvent vapour,
- stop working immediately in case of electrical arcs,
- never store chemicals and solvents in the working area.
- use paint whose flash point is the highest possible to prevent from any formation of gas and inflammable vapours (refer to materials' safety instructions),
- install a cover on the drums to reduce the diffusion of gas and vapours in the spraybooth.

TOXIC PRODUCT HAZARDS

Toxic products or vapours can cause severe injury not only through contact with the body, but also if the products are ingested or inhaled. It is imperative :

- to know the material products and their risks,
- notified or hazardous materials must be stored in accordance with the regulations,
- the material must be stored in an appropriate container, never place materials in a container where there is a risk of spillage or leakage,
- a procedure must be applied for the safe disposal of waste material. It must comply with all prevailing regulations and legislations of the country where the equipment is to be used,
- protective clothing should always be worn in compliance with the material manufacturers' recommendations,
- depending on the application and chemical safety instructions, safety glasses, hearing protective earplug, gloves, foot wear, protective masks and possible breathing equipment should be worn to comply with the regulations (Refer to chapter "Safety equipment of KREMLIN selection guide).

CAUTION!

It is forbidden to use material containing high concentrations of halogenated hydrocarbon solvents with **aluminium or zinc fillers** .Non-compliance with the instructions may cause explosion risk causing serious or fatal injury.

EQUIPMENT REQUIREMENTS

Guards (motor cover, coupling shields, connectors,...) have been designed for a safe use of the equipment.

The manufacturer will not be held responsible for bodily injury or failure and / or property damage due to destruction, the overshadowing or the partial or total removal of the guards.

PUMP

Before carrying out any work, it is imperative to read and clearly understand the disassembly and reassembly instructions before servicing. The operator must understand the equipment and the safety instructions. These instructions are available in the equipment manuals.

The air motor is designed to be mounted with a pump. Never modify any components or couplings. When operating, please keep hands away from moving parts. Before starting up the equipment, please read the PRESSURE RELIEF instructions. Please ensure that any relief or drain valves fitted are in good working order.

HOSES

- Keep hoses out of circulation areas, moving parts or hot surfaces,
- Never expose product hoses to temperature higher than + 60°C / 140° F or lower than 0°C / 32° F,
- Never pull or use the hoses to move the equipment,
- Tighten all fittings as well as the hoses before operating the equipment,
- Check the hoses regularly; change them if they are damaged,
- Never exceed the working pressure (WP) indicated on the hose.

USED PRODUCTS

Considering the wide variety of products that are available and can be used in our equipment it is impossible to check and make recommendations for all chemical data, regarding the risks of possible chemical attack and their long term chemical reaction

KREMLIN REXSON can not be held liable for :

- Compatibility of wetted parts,
- Risks to staff and the surroundings,
- for worn or defective parts, for faulty equipment or units, or the quality of final product.

It is the responsibility of the user to know and prevent any possible risks such as toxic vapours, fires or explosions. He shall determine the risks of immediate reactions or pursuant to repeated exposures of the staff,

KREMLIN REXSON shall not be liable for physical injuries, direct or indirect material damages caused by the use of chemicals.

2. HANDLING

Check the weight and the dimensions of the equipment
(**☞ refer to 'Technical features' section of the instruction manual**)

If weight and dimensions are too important, the unloading must be carried out by means of a forklift or any other appropriate means with a qualified personnel and in a clear horizontal area to prevent from risks of damage injury or an accident.

The centre of gravity is not in the centre of the machine : carry out by hand a stability-test after having lifted the whole at 10 cm / 3.937" maximum.

After the unloading, the handling of the whole (eg: elevator pump) is carried out by means of a pallet truck taking the bottom part of the frame.

Remark : Each pump motor is fitted with a ring. The ring is designed for the hoisting of one pump and can not be used for the handling of the complete machine.

3. STORING

Storing before installation :

- Storing ambient temperature : 0 / +50 °C / 0 / +122°F
- Protect the whole against dust, water trickling, dampness and shocks.

Storing after installation :

- Operating temperature : +15 / +35 °C / +59 / +138.2° F
- Protect the whole against dust, water trickling, dampness and shocks.

4. INSTALLATION OF THE EQUIPMENT

The machine is installed on a stable horizontal floor (for eg a concrete flag).

To avoid risks caused by static electricity, the equipment as well as its components must be grounded.

- **For the pumping equipments** (pumps, pneumatic rams, frame...), a section wire of 2.5 mm² is fixed on the material. Use this wire to connect the material to "the general ground". In case of severe environments (mechanical protection of the wire of earthing insufficient, vibrations, mobile material...) where function damages at the ground are probable, the user have to replace the provided wire of 2.5 mm² by a device more adapted to its environment (wire with a more important section, bonding strip, fixing by thimble with eyelet...),

The continuity of the ground must be controlled by a qualified electrician. If the continuity of the ground is not ensured, check the terminal, the wire and the earthing point. **Never** use the material without have solved this problem.

- In the severe cases of environments (mechanical protection of the wire of earthing insufficient, vibrations, mobile material...) where damages of the function put at the ground are probable, the user will have to replace the wire of 2.5 mm² provided, by a device more adapted to its environment (wire of more important section, bonding strip, fixing by thimble with eyelet...),
- **The gun** must be 'grounded' via a material hose or an air hose. In case of spraying by means of a gun with cup, the air hose must be conductive,
- **The materials to be painted** must also be grounded.

All the materials situated in the working area shall be grounded.

- **Never store** more than necessary inflammable materials inside the working area,
- The materials must be stored into **approved drums** and grounded,
- Use only grounded **metals containers** for the use of cleaning solvents,
- **Cardboard and paper are prohibited.**

5. MARKING OF THE EQUIPMENT

Each equipment has a marking plate.

The plate consists of the name of the manufacturer, the equipment part number and important information for correct use of the equipment (air pressure, electric power,...).

NOTICE ORIGINALE
/ TRANSLATION FROM THE ORIGINAL MANUAL
/ ÜBERSETZUNG DER ORIGINAL BETRIEBSANLEITUNG
/ TRADUCCIÓN DEL LIBRO ORIGINAL

NOTA : Si le piston est endommagé, le remplacement de ce dernier implique le remplacement systématique de la cartouche.

NOTA : If the piston is damaged, you must change at the same time the cartridge.

ANMERKUNG: Wenn der Kolben beschädigt ist, müssen Sie gleichzeitig den Kolben und die Packung ersetzen.

NOTA : Si el pistón tiene un desgaste, su cambio llega al cambio del cartucho.

Guards (air motor cover, coupling shields, housings ...) have been designed for safe use of the equipment.

The manufacturer will not be held responsible for bodily injury or failure and / or damage to property due to removal or partial removal of the guards

CAUTION :

Before any intervention on the equipment, shut off the air supply and follow the general safety instructions. Open the drain or the gun to depressurize the gun. The ram must be in the low position.

CAUSE	SOLUTION
The pump does not start	Check the pump air supply. Refer to spray gun manual.
Priming trouble : → Air is always coming out from the spray gun → When priming, air (or material) does not come out from the spray gun	Be sure that the spray gun is fully opened and air evacuated through this one. Check the cleanliness of the strainer. Air intake at the fittings or at the suction rod. Check the upper spring. Change the valve under the cover Check the pump valves. If a valve is stucked by dry paint, it can be unsticked without disassembling it. Blow air pressure directly by suction fitting.
The pump does not stop at once when shutting off the spray gun : → The pump stops only on down stroke → The pump stops only on up stroke	Check exhaust valve or piston seal. Check / change the upper spring Change the valve under the cover Check suction valve or upper cartridge. Blow air pressure in the suction valve Check the valve and the lower spring
The pump locks with an air leakage to the motor	Check the motor valve under the cover, the seal O-ring and the seal holder
On Intensive™ pump, the product overflow from the tank and leaves by the leakage outlet	Check the upper packing (GT cartridge, MB-A cartridge), change cartridge if it is necessary. Check / change the upper cartridge and the piston rod
Spraying trouble	Refer to spray gun manual.

OPERATING PRINCIPLE AND START-UP

TRANSLATION FROM THE ORIGINAL MANUAL

IMPORTANT : Before assembly and start-up, please read and clearly understand all the documents relating to the equipment (professional use only).

THE PICTURES AND DRAWINGS ARE NOT CONTRACTUAL. WE RESERVE THE RIGHT TO MAKE CHANGES WITHOUT PRIOR NOTICE.

KREMLIN - REXSON

150, avenue de Stalingrad

93 245 - STAINS CEDEX - France

☎ : 33 (0)1 49 40 25 25 Fax : 33 (0)1 48 26 07 16

www.kremlin-rexson.com

1. OPERATING PRINCIPLE

The pump consists of :

- an alternating air motor (B),
- an hydraulic section (C) mechanically coupled to the air motor (B).

The air motor is supplied with compressed air by means of the regulator (D). The pressure is read on the gauge (E).

During its alternating movement, the air motor drives the piston of the hydraulic section (C), the fluid is drawn in (L) and forced under pressure in (N).

Due to its design, this pressure is always the one read on the gauge

Example : for a pump ratio 07/1 : $7 \times 6 \text{ bar} = 42 \text{ bar}$ / $7 \times 87 \text{ psi} = 609 \text{ psi}$

The spraying air pressure of the gun is adjusted by means of the regulator (knob) (F) and the pressure can be read on the gauge (G) (Only Airmix® model : see figure1).

- To adjust the fluid flow rate, turn the regulator (D).
- To adjust the spraying air, turn the regulator (F) (read on the gauge (G) (Only Airmix® model : see figure 1).

2. MISE EN SERVICE

Protective clothing (gloves, protective masks, glasses, hearing protective earplug, protective clothing) should be worn to comply with the recommendations.

The working area must be correctly ventilated.

2-1 FILLING

Captions :

A Intensive™ pump (B + C) B Motor C Fluid section D 'MOTOR AIR' regulator E Gauge F 'GUN AIR' regulator G Gauge H Air inlet valve I Ground	K Protection carter L Suction rod M Air static (static conductor) N HP fluid section O AIRMIX® or AIRLESS® gun P T lubricant (125 ml / 4.4 oz)
---	--

(For specific installation, please contact your KREMLIN REXSON representative).

Guards (air motor cover, coupling shields, housings ...) have been designed for safe use of the equipment.

The manufacturer will not be held responsible for bodily injury or failure and / or damage to property due to removal or partial removal of the guards

Start up procedure :

- Ground the pump.
- **If the pump is an Intensive™ one, fill the wetting cup (S) with T lubricant (P) or with an appropriate cleaning solvent.**
- Unscrew the air regulators (D and F),
- Interconnect the equipment with the air pressure network (clean and dry air - P < 6 bar / 87 psi)
Install a water drop, if it is necessary.
- Connect all the hoses (M& N) as well as the gun (O).
- Remove the gun air cap by unscrewing the cap ring and nozzle (only in case of an Airmix® gun).

■ **FLUSHING WITH SOLVENT**

- Immerse suction rod (L) into solvent-filled container.
- Open motor air pressure supply - valve (H).
- Point the spray gun, not supplied with air, towards the material container and press the trigger.
- Increase **gradually** the air regulator (D) so that the pump runs slowly (Proportionally to pressure ratio). When material flows out regularly, release the trigger.
- Drain all solvent from the pump.

■ **PRIMING WITH MATERIAL**

- Immerse suction rod (L) into material container.
- Point the spray gun, not supplied with air, towards the material container and trigger the gun until the material flows out regularly.

■ **WORK**

- Reinstall the ring, the aircap and the nozzle (only in case of an Airmix® gun) on the gun.
- Adjust air regulator (D) to get the appropriate material pressure and flow rate.
- **Gradually** open air regulator (F) to adjust spraying air to obtain the required spray pattern.

2-2 PUMP SUPPLIED IN GRAVITY

⚠ **CAUTION: The pumps can be supplied in gravity but not in filling.**

Interconnect the pump fluid inlet with the gravity cup supply hose and start up the pump as previously indicated.

3. SHUTDOWN AT THE END OF THE WORK

■ SHORT DURATION SHUTDOWN

- Decrease the material pressure of air regulator (D) until reading **0 bar / 0 psi** on gauge (E).
- Trigger the gun to depressurize the system.
- Unscrew the gun air regulator (F) or disconnect the gun air inlet.
- Remove the gun air cap and the nozzle (only in case of an Airmix® gun) from the spray gun and soak it into solvent.

■ LONG DURATION SHUTDOWN

- Decrease the material pressure of air regulator (D) so that the pump runs slowly.
- Unscrew the gun air regulator (F) or disconnect the gun air inlet.
- Remove the gun air cap and the nozzle (only in case of an Airmix® gun) from the spray gun and soak it into solvent.
- Remove the suction rod from the material container and immerse it in a solvent-filled container. Take all the appropriate precautions in the presence of flammable solvents.
- Point the gun towards the container and trigger the gun. When the solvent flows out, point the gun towards the recovery container.
- When the solvent flows out clean, release the gun trigger.

Nota : If the pump is an Intensive™ one, release the spray gun trigger when the pump piston is in a low position. To prevent from damaging the seals when starting once again the pump, the piston must be immersed into solvent.

- Fully unscrew the air regulator (D) and shut off the compressed air valve (valve H).
- Trigger the spray gun to decompress the hoses. Therefore, the pump and the hose remain filled with solvent at the atmospheric pressure.

4. SAFETY DEVICE

Guards (air motor cover, coupling shields, housings ...) have been designed for safe use of the equipment.
The manufacturer will not be held responsible for bodily injury or failure and / or damage to property due to removal or partial removal of the guards

AIRMIX® pump : A relief-valve (setting : 6.5 bar / 94 psi) is fitted on the pump air motor - thus protecting this one from an overpressure which could damage it.

1. DESCRIPTION

- Compact pneumatic pump
- Low maintenance and ease of use

Designed for :

- Supplying a gun, model AIRMIX® or AIRLESS depending upon the pump configuration
- For all kind of paints and varnishes

2. TECHNICAL FEATURES

▪ PUMP EOS 15-C25

Motor model 245-4
Pump body model25 cc
Pressure ratio15/1
Weight (bare wall mounted pump)7,7 kg

Wetted parts :

- Flange : Stainless steel
- Cylinder : Hard chrome stainless steel
- Piston : PVD treated stainless steel
- Seat : Stainless steel
- Cartridge : Stainless steel
- Pump foot : Stainless steel
- Suction valve : POM

Pump sealing :

Upper : Stainless steel cartridge with GT seal
Lower : UHMW Polyethylene seal

Motor stroke	100 mm	4"
Air motor piston section	24,5 cm ²	3.8 sq. in
Fluid section	2,8 cm ²	0.43 sq. In
Fluid delivery per cycle	25 cm ³	0.83 oz
Number of cycle for 1 liter of product	40	40
Fluid delivery (30 cycles)	0,75 l	0.2 US gal
Maximum air inlet pressure	6 bar	87 psi
Maximum fluid discharge pressure	95 bar	1305 psi
Weighted sound pressure (LAeq)	71,2 dBa	71.2 dBa
Maximum operating temperature	60°C	140° F

Fluid outlet pressure and air consumption depending upon the air supply pressure :

- 2 bar : 17l/min,
- 4 bar : 46l/min,
- 6 bar : 82l/min.

Nota : Data given for your information only.

Test conditions :

- Test duration : 30 s,
- Motor air pressure: 6 bar / 87 psi,
- Material used : water,
- Gun : Xcite™,
- Tip : 09.

▪ **PUMP EOS 30-C25**

Motor model.....420-4
Pump body model.....25 cc
Pressure ratio.....30/1
Weight (bare wall mounted pump)...7,7 kg

Wetted parts :

- Flange : Stainless steel
- Cylinder : Hard chrome stainless steel
- Piston : PVD treated stainless steel
- Seat : Stainless steel
- Cartridge : Stainless steel
- Pump foot : Stainless steel
- Suction valve : POM

Pump sealing :

Upper : Stainless steel cartridge with GT seal
Lower : UHMW Polyethylene seal

Motor stroke	100 mm	4"
Air motor piston section	42 cm ²	6.5 sq.in
Fluid section	2,8 cm ²	0.43 sq. In
Fluid delivery per cycle	25 cm ³	0.83 oz
Number of cycle for 1 liter of product	40	40
Fluid delivery (30 cycles)	0,75 l	0.2 US gal
Maximum air inlet pressure	6 bar	87 psi
Maximum fluid discharge pressure	180 bar	2610.5 psi
Weighted sound pressure (LAeq)	74,9 dBA	74.9 dBA
Maximum operating temperature	60°C	140 °F

Fluid outlet pressure and air consumption depending upon the air supply pressure :

- 2 bar : 49l/min,
- 4 bar : 118l/min,
- 6 bar : 179l/min.

Nota : Data given for your information only.

Test conditions :

- Test duration : 30 s,
- Motor air pressure: 6 bar / 87 psi,
- Material used : water,
- Gun : Xcite™,
- Tip : 09.
